Office Action Summary

Application No.

09/894,827

Applicant(s)

FUKUSHIGE ET AL.

Examiner

John S. Chu

Art Unit

1752

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 22-46 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 22-46 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

This Office action is in response to the RCE filed February 26, 2004.

1. The rejection under 35 U.S.C. 102(e) as being clearly anticipated by CUNNINGHAM et al '863 is **withdrawn** in view of the amendment canceling claims 1-21.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 22-43 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11,13,15,17 of copending Application No. 09/521,616. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed photopolymerizable composition in 09/521,616 recites a recording materials comprising a borate compound, a spectral sensitizing dye, a radical polymerizable composition [compound] and the color developing component A and color developing component B, wherein the recited recording material overlaps and anticipates currently claimed the claimed photopolymerizable composition and recording material as recited in current application 09/894,827.

Art Unit: 1752

The claimed recording material in copending 09/894,827 claims a recording material comprising a support, and at least one recording layer provided there which includes a photopolymerizable composition comprising (a) a polymerizable compound having an addition-polymerizable unsaturated bond; (b) an organic dye and (c) at least one kind of an organoboron compound represented by general formula (I)

The definition for the R groups above include alkyl groups, substituted alkyl, aryl and substituted aryl groups, etc. as seen in the current claims of 09/894,827. These groups are generic to the specifically claimed R1 to R4 groups as defined in the borate compound in 09/521,616 and anticipate and overlap the claimed scope such that a patent to both applications would extend the grant to the same invention.

With respect to the obviousness analysis of the two applications the examiner notes that anticipation is the epitome of obviousness and as a result the claimed inventions as stated above though are not identical, yet are not patentably distinct from one another, thus they are seen as obvious over one another to the skilled artisan.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1752

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 22-46 rejected under 35 U.S.C. 103(a) as being unpatentable over

CUNNINGHAM et al. in view of GOTTSCHALK et al '942.

22. (new): A photopolymerizable composition comprising:
- (a) a polymerizable compound having an addition-polymerizable unsaturated bond;
 - (b) an organic dye; and
 - (c) at least one kind of an organoboron compound represented by the following general formula (I) in a proportion of at least one mole per mole of the organic dye:

General formula (I)

wherein R is selected from the group consisting of an alkyl group, a substituted alkyl group, an aryl group, a substituted aryl group, an aralkyl group, a substituted aralkyl group, an alkaryl group, a substituted alkaryl group, an alkenyl group, a substituted alkenyl group, an alkynyl group, a substituted alkynyl group, an alicyclic group, a substituted alicyclic group, a heterocyclic group, a substituted heterocyclic group, and a derivative thereof; Rs may be the

Art Unit: 1752

same as or different from each other; two or more of these groups may join together directly or via a substituent and form a boron-containing heterocycle; and X represents an alkali metal, quaternary ammonium, pyridinium, quinolinium, diazonium, morpholinium, tetrazolium, acridinium, phosphonium, sulfonium, oxosulfonium, iodonium, S, P, Cu, Ag, Hg, Pd, Fe, Co, Sn, Mo, Cr, Ni, As, or Se;

wherein the photopolymerizable composition further includes heat-responsive microcapsules comprising a color-forming component.

CUNNINGHAM et al discloses photopolymerizable compositions comprising a quinolinium dye compound, and a borate compound suitable as photoinitiators for the polymerizable composition. The quinolinium dye as disclosed in CUNNINGHAM et al meets the claimed ingredient (c) for the organoboron compound. Applicants are also directed to column 22, line 52 – column 25, line 24 where an ingredient [D] is taught by CUNNINGHAM et al wherein a UV absorber co-initiator may be used additionally in said photopolymerizable composition (col. 22, lines 52-55). Ingredient [D] is taught to be a cationic dyes to include rhodamine dyes (column 22, line 5-10), cyanine dyes (column 23, line 35), and coumarin compounds (column 24, lines 26-35). This disclosure clearly suggests and teaches the skilled artisan the use of alternative dyes to be added as coinitiators to the photopolymerizable composition of CUNNINGHAM et al '942 and still maintain the improved properties as disclosed.

CUNNINGHAM et al further discloses the additional provisions of their polymerizable composition as seen in column 35, lines 46-59 wherein the composition can be used in an image recording material having microcapsules and decolorizing image recording materials, etc. Thus

the skilled artisan is directed to use the disclosed polymerizable composition in image recording materials having microcapsules.

CUNNINGHAM et al fails to explicitly disclose an image recording material using their disclosed photopolymerizable composition in an example and lack the use of ingredient [D] such as a cyanine dye as a co-initiators in the examples.

GOTTSCHALK et al '942 discloses a photohardenable composition suitable for the use in photosensitive materials, which form color images. These materials use three sets of microcapsules containing cyan-forming capsules, magenta-forming capsules and yellow-forming capsules. At least one of the aforementioned capsules further contain photohardenable composition including a dye-borate complex and a free radical addition polymerizable compound. The disclosure of GOTTSCHALK et al provides for a working example wherein the photohardenable compositions are incorporated in an image recording material having microcapsules. GOTTSCHALK et al lacks the specific dye-borate complex as claimed, however, his disclosure implicitly suggests the use of other dye-borate photoinitiators such as those taught in CUNNINGHAM et al.

It would have been *prima facie* obvious to one of ordinary skill in the art of photosensitive recording materials to use the borate compound as disclosed in column 51, line 1-44 as a dye-borate photoinitiator in GOTTSCHALK et al and reasonably expect same or similar results with respect to rapid polymerization for the photosensitive recording materials. Secondly it would have been *prima facie* obvious to the skilled artisan seeing the various applications as disclosed in CUNNINGHAM et al for image recording materials to use the CUNNINGHAM et al photopolymerizable composition in an image forming material such as disclosed in

Art Unit: 1752

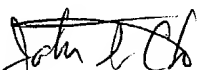

GOTTSCHALK et al in the place of the photohardenable composition having a dye-borate complex and reasonable expect same or similar results with respect to having photopolymerizable compositions which are sensitive at longer wavelengths.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. YAMAGUSHI et al disclose light-sensitive heat-sensitive compositions wherein a photopolymerizable composition is microencapsulated with image forming decolorizing dyes. HUTCHINGS et al disclose the formation of microcapsules and their uses in color forming photosensitive materials.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Chu whose telephone number is (703) 308-2298. The examiner can normally be reached on Monday - Friday from 9:30 am to 6:00 pm.

The fax phone number for this Group is (703) 305-7718.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.

John S. Chu
